Contents

THE SCIENTIST | THE-SCIENTIST.COM | VOLUME 33 NUMBER 04

Features

28 Solid Tumors, Meet CAR Ts
Engineered T cells move out of their home environment of the blood and into new territory.
BY KERRY GRENS

36 When Cancers Become Contagious
The Tasmanian devil and a handful of other species carry transmissible, "parasitic" forms of cancer that may not be as rare as once believed.
BY KATARINA ZIMMER

44 Tiny but Mighty
Advances in the functional characterization of newly discovered microproteins hint at their diverse roles in health and disease.
BY ANNIE RATHORE

ON THE COVER: KOTRYNA ZUKAUSKAITE
13 FROM THE EDITOR
Miracle Elixirs
A long way into the quest to vanquish cancer, our ears strain to hear the words, "Cancer is cured"—a yearning that can cloud our judgment.
BY BOB GRANT

19 NOTEBOOK
When Immunotherapy Backfires; Invisible Inheritance; Cancer's Sex Bias; Arctic ID

26 MODUS OPERANDI
Drug Sponge
A 3D-printed latticework tube installed in a vein collects excess chemotherapy medication in pigs.
BY RUTH WILLIAMS

52 THE LITERATURE
Fat's role in cancer; training T cells; germ cells gone astray

54 PROFILE
Cancer Vaxxer
Miriam Merad switched from treating cancer patients to studying innate immune cells and designing novel immunotherapies, including cancer vaccines.
BY ANNA AZVOLINSKY

57 SCIENTIST TO WATCH
Sophia Lunt: Tumor Tracer
BY ASHLEY YEAGER

59 LAB TOOLS
When Cancer Evades Immunotherapy
Researchers are using an array of techniques to learn how cancer cells resist treatment with immune-activating drugs.
BY MARISSA FESSENDEN

64 BIO BUSINESS
Playing Small Ball
Renewed interest from the biotech industry sparks hope for drugging RNA with small-molecule therapeutics to treat cancer and other diseases.
BY CLAIRE ASHER

69 READING FRAMES
A Review of Everything in Its Place
This posthumously published collection of essays by Oliver Sacks further cements the neurologist's place in the pantheon of science writers.
BY BOB GRANT

72 FOUNDATIONS
Chemical Weapon to Chemotherapy, 1917-1946
BY CAROLYN WILKE

10 CONTRIBUTORS
14 SPEAKING OF SCIENCE
70 THE GUIDE
71 RECRUITMENT

CORRECTIONS:
In the March issue: "The Aging Workforce" incorrectly stated that the startup funds Prachee Avasthi received from her institution were small. They were in fact generous, but had a fixed expiration date. Additionally, the infographic caption suggested that the number of early-career grant awardees moderately increased. In fact, it moderately decreased.

"The Resilient Parasite" listed an incorrect position for David Kaslow at PATH. Also, while millions of malaria-caused deaths were averted, annual mortality rates dropped by the hundreds of thousands.

"How Chromosomes X and Y Got Their Names, 1899" incorrectly stated that a 1960 panel concluded that human autosomes should be numbered in ascending order, from shortest to longest. In fact, they are numbered from longest to shortest.

The image credit listed in the "Double Trouble" was incorrect. It should have been credited to Kelly Finan. The Scientist regrets these errors.
