OUR INNER NEANDERTHAL
ANCIENT SECRETS IN THE HUMAN GENOME

DRUG TRIALS FOR FRAGILE X

DOPING ATHLETES VS ANTI-DOPING OFFICIALS

RETHINKING ANIMAL RESEARCH

PLUS
NEW MODEL ORGANISMS ON THE BLOCK
Features

30 The Doping Arms Race
Athletes have devised ways to outsmart tests for performance-boosting drugs, but scientists are working hard to get ahead.
BY ANNA AZVOLINSKY

36 Our Inner Neanderthal
From skin color to immunity, human biology appears to be linked to our archaic ancestry.
BY JEF AKST

44 A Broken X
Despite a solid understanding of the biological basis of fragile X syndrome, researchers have struggled to develop effective treatments. But recent trials offer hope.
BY RANDI HAGERMAN

Department Contents

13 FROM THE EDITOR
We’re Different, We’re the Same
Diversity is a strength. And so is a full appreciation of our similarities.
BY BOB GRANT

16 NOTEBOOK
Impervious; Stellar Influence?; Help for Hellbenders; Complex Inheritance

28 CRITIC AT LARGE
Diversify Our Human Genomic Data
To better understand the biology of our species and to make individualized medicine accessible to all, we need to consider the comprehensive genetic makeup of a wider swath of humanity.
BY CHARLES LEE

28 MODUS OPERANDI
Optogenetics Sans Genetics
DNA-coated gold nanorods enable cells to be activated by light without genetic manipulation.
BY RUTH WILLIAMS

52 THE LITERATURE
A synthetic ion channel makes plants grow faster; a new family of viruses; potential biomarkers of suicidal thoughts in PTSD patients

54 PROFILE
Defining Rare Disorders
Judith Hall was instrumental in incorporating genetics into medical practice, describing previously unknown disorders.
BY ANNA AZVOLINSKY

57 SCIENTIST TO WATCH
Cigall Kadoch: Unraveling Cancer
BY CHIA-YI HOU

59 LAB TOOLS
Genetics’ Next Top Models
You’re well-acquainted with Drosophila, C. elegans, and the humble lab mouse, but lesser-known model systems are poised to make their mark.
BY AMBER DANCE

63 CAREERS
Fixing Animal Research
Many in vivo preclinical studies are poorly designed and generate irreproducible data, but efforts to address the problem are on the rise.
BY DIANA KWON

67 READING FRAMES
Meeting Our Maker
Humans are the first species to decipher the genetic code that underlies our biology, but does it hold all the answers?
BY BILL SULLIVAN

72 FOUNDATIONS
Modern Synthesis, 1937
BY CHIA-YI HOU

THis MONTH AT THE-SCIENTIST.COM:

VIDEO
Fragile Xpert
The MIND Institute's Randi Hagerman discusses symptoms and treatment in children with fragile X.

VIDEO
Genomic Medicine's Future
Charles Lee, scientific director of the Jackson Laboratory for Genomic Medicine, talks about his vision for how genomic discovery will fuel individualized medicine.

VIDEO
Neanderthais in Our Family Tree
Vanderbilt University's Tony Capra, who is quoted in this month's feature article on Neanderthal DNA in modern genomes, discusses the effects of interbreeding between ancient hominin groups.

AS ALWAYS, FIND BREAKING NEWS EVERY DAY ON OUR WEBSITE.

Coming in October

HERE'S WHAT YOU'LL FIND IN NEXT MONTH'S ISSUE

• How air pollution could be affecting the human brain

• Scientists' emerging understanding of neutrophil extracellular traps

• A new view of Parkinson's disease

• How could the Trump administration's suggested ban on fetal tissues in research hurt vaccine development?

AND MUCH MORE
